

128T Installer 2.2.0 Release Notes

New Features and Improvements

- **IN-55** Installer supports and installs CentOS 7.5 for 128T Software

Issues Fixed

Caveats

- **IN-106** - Installer fails due to presense of .repodata Symptom: Installer fails with `Failed creating repo database in directory /var/lib/install128t/repos/saved: Temporary repodata directory /var/lib/install128t/repos/saved/.repodata/ already exists!`
Corrective Action: On the system with the error, remove the directory `/var/lib/install128t/repos/saved/.repodata/` and restart the installation
